

Student Blackberry Phone

Setting up the blackberry is simple.

Go to <http://att.com/blackberrystart>

Create an account

After you login you setup accounts. One of the accounts is your uamont account. You can also put in yahoo or gmail accounts.

Within a few minutes they will send your phone a message that the email is setup.

The AT&T store walked me through it when I bought my phone but it was very straight forward.

Only smart phones that have 'Direct Push' on them will work to check email from our server.

The only information you need to have them connect is:

Email type: Microsoft Exchange

No pop3 or Imap must be exchange

Email server: uam-studmail.uamont.edu

Domain (optional): student.uamont.edu

Username: *****

Password: *****

Outlook Web Access URL: <https://uam-studmail.student.uamont.edu/owa/>

Mailbox Name: *****

User Name: *****@uamont.edu

Troubleshooting:

Login to your blackberry start page and save the settings again. The uamont account will be marked with a red circle because it's not working.

Still have problems:

Go to your providers site or go talk to them
