

How to connect with Wireless VIA IPAD (FACULTY-STAFF only)

05/05/2011

Subject: WIRELESS connection with IPAD

Here's what I do...when wireless isn't connecting but weevilwireless is available.

- 1) Go to settings --- Wi-Fi and turn off wi-fi. Then Turn it back on and it should display all the available wi-fi connections.
- 2) I opened WeevilWireless by touching the blue arrow --- selected FORGET this network. It stayed in the list --but will not automatically try to connect.
- 3) Then select it again. It automatically prompted me for my domain username and password.
- 4) Then it displayed a message about certificate. I clicked ACCEPT
- 5) The Wi-fi symbol displayed in the top corner... I opened a webpage and tried to go to a page – it defaulted directly to the UAM wireless Welcome page.
- 6) Selected link for faculty staff - Entered domain username & password again selected IPAD as type. Took a minute or so to process ---there's a blue bar moving across the page.
- 7) Receive message that I was CONNECTED & I needed to close and reopen.

I went back to main screen – open web back up – selected a page and it loaded.
