

How To Scan any Removable Media with Trend Anti-virus software

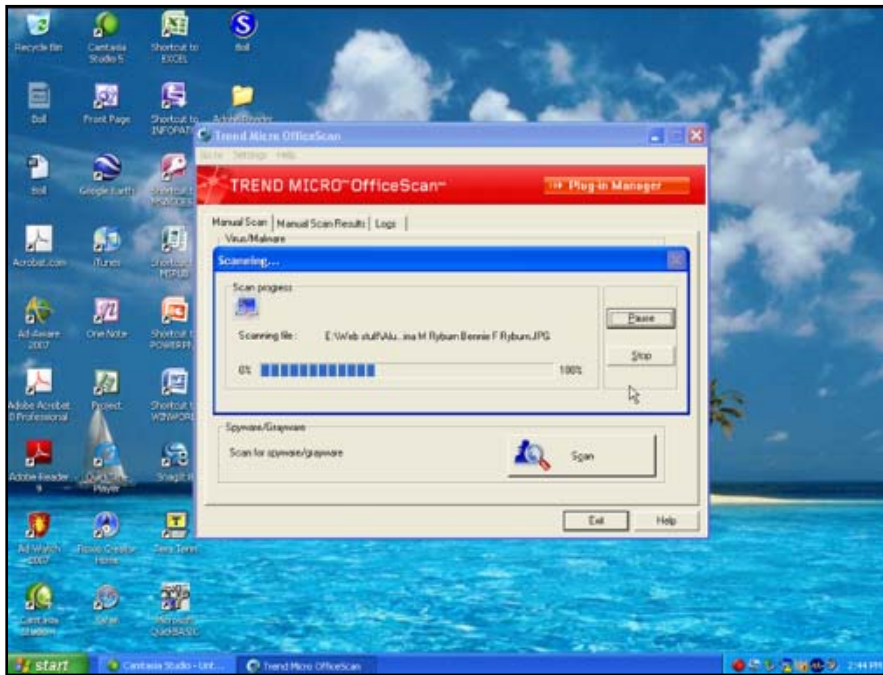

Starting at your desktop, right click on the Trend icon. Click on **Officescan Console**.

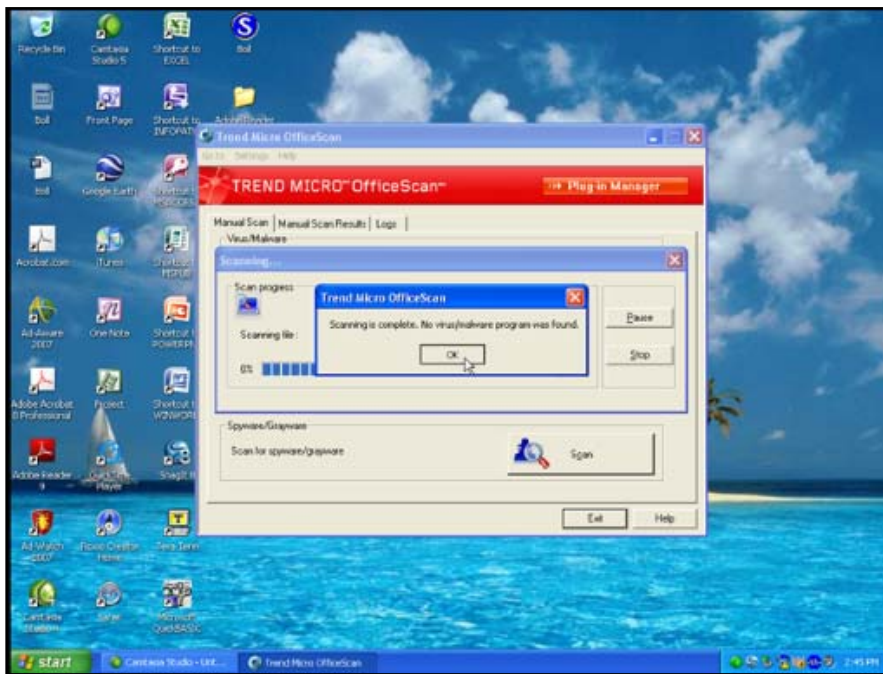

A new window will pop up. Check the box next to the drive that you would like to scan (you can scan any drive; you're not limited to your flash drive). Once you have done this, click on the **Scan** button.

The scan will start automatically. This may take a few minutes depending on the amount of content stored on your removable media.

When it has finished and detected no viruses, a window will pop up. Click on the **OK** button.

You have completed the scan and may now exit the program.

If your scan detects a virus, please contact the Information Technology department before continuing the use of your device.

You have completed this online tutorial.
