

# CARBON CREDIT PROGRAMS

## for Arkansas Forest Landowners

Forest landowners provide several ecosystem services through their forest, including sequestering and storing carbon while releasing oxygen into the atmosphere. In return, landowners can receive compensation by participating in carbon credit programs.

- Carbon programs operate under compliance and voluntary markets
- Voluntary-based programs tend to have shorter contracts than programs under compliance markets
- The value of carbon credits can vary depending on the market:

Compliance: **\$15-18/mt**  
 Voluntary: **\$4-8/mt**
